GenshinStore.gg

Genshin Impact is a game developed by Mihoyo, now known as Hoyoverse, which is an open-world game featuring a plethora of characters, having a rarity of either a 4-star, or a 5-star, and, on the same scale, a wide arsenal of weapons, having rarities from 3-stars to 5-stars. Characters are assigned only a specific type of weapon among these five: Swords, Bows, Catalysts (which act like spell tomes), Spears, and Claymores (which are a larger and heavier version of swords).

In addition, characters are aligned to a specific element each, among these 7: Geo, Anemo, Pyro, Cryo, Hydro, Dendro, and Electro. These elements react with each other, to varying degrees of potency and purpose.
Finally, this game has a feature called "Banners", where one "pulls" for characters and/or weapons to acquire them using in-game currency called Fates and Primogems.

GenshinShop.gg is a site that features a shope and is mainly about Genshin Impact, but also shows various information too that are helpful to players, such as the website's countdown to the game's daily reset time, which, on the Asian servers, is at 4:00 AM each day. In addition, the site is supposed to regularly update to keep up with the currently available character and weapon banners.

In regards to that, the site features a section upon clicking a banner, where it shows the user a page, which, upon clicking a character's portrait at the top, shows its splash art, a brief description of the character, and the web developers' opinion on the character, whether be it about their strength and usability, looks, or just general opinion. The same generally applies to the weapon banner.

Finally, the site features a store section, which, asks for the user's personal information necessary for the transaction to recharge either Genesis Crystals, which are essentially a substitute for Primogems, or what's called Blessing of the Welkin Moon, a sort of daily pass that allows a player to receive Genesis Crystals outright, and a lot of Primogems, assuming they ensure that they can log in at least once everyday.

The aforementioned user's personal information involved in the transaction are the following:
1. The form of payment. Currently, the only supported forms of payment are through Visa, or MasterCard.

2. The account's UID (or User ID), a 1 to 9 digit number exclusive to a single account which will receive the recharge produced by this transaction
3. The server in which the UID belongs, which is divided between NA (North America), EU (Europe), Asia, or the SAR (which is composed of Taiwan, Hong Kong, and Macau)
4. The user's first name and last name
5. The user's email address; and finally
6. Following after #1, the user's credit card number
